

The Evidence Of God #1

There are a lot of people who believe that Darwinism completely justifies atheism. They believe they have investigated the issue sufficiently by studying biology, chemistry, geology, anthropology, and other sciences. They have no doubt that natural selection trumps the creative power of God (cf. Acts 14:15).

However, the facts of science, properly examined, points toward the existence of a Creator. Simply put, Darwinism is too far-fetched to be credible. Think about it: Darwinism demands that you believe that nothing produces everything, non-life produces life, randomness produces fine-tuning, chaos produces information, unconsciousness produces consciousness, and non-reason produces reason.

Based on this, Darwinism would require quite a blind leap of faith. Would you be willing to make it? The central pillars of evolutionary theory quickly rot away when exposed to scrutiny. For example, naturalistic processes have utterly failed to explain how non-living chemicals could somehow assemble themselves into the first living cell.

In addition, the overall fossil record has stubbornly refused to confirm the grand claim of Darwinian transitions. The majority -- or, according to some experts, all -- of the world's 40 phyla, the highest in the animal kingdom, virtually sprang forth with unique body plans more than 500 million years ago. The sudden appearance of these radically new life forms, devoid of prior transitions, has turned Darwin's Tree of Life on its head. In the next article, we will consider the alternative of design by God.
